Mobile: +91- 9398053140

Email: nadimpallinaveen2@gmail.com

PROFILE SUMMARY

- Having 4.5+ years of IT experience in designing, developing, and maintaining scalable enterprise applications using Java/J2EE technologies
- Strong expertise in Core Java (OOPs, Collections, Multithreading, Exception Handling) and enterprise technologies like JDBC, Servlets, and JSP
- Extensive experience in Spring Framework (Core, MVC, JDBC, ORM, JPA) and Spring Boot for building microservices-based architectures
- Proficient in developing event-driven and real-time systems using Apache Kafka
- Hands-on experience in cloud-based application development and deployment using AWS (EC2, S3, RDS, Lambda, CloudWatch, IAM)
- Strong knowledge of ORM frameworks like Hibernate and Spring Data JPA for efficient data persistence
- Experienced in building and consuming RESTful and SOAP web services
- Skilled in full-stack development with React JS and React Native, along with HTML, CSS, and JavaScript
- Experience working with databases such as MySQL, PostgreSQL, and MongoDB
- Proficient in version control systems including Git, GitHub, and GitLab
- Hands-on experience with build and automation tools like Maven and Gradle, along with basic Docker and CI/CD pipelines
- Hands-on experience with AI-assisted software development using GitHub Copilot, ChatGPT, AI-powered code generation, debugging, testing, and documentation tools.
- Experience in writing unit and integration tests using JUnit and Mockito
- Familiar with Agile/Scrum methodologies, actively participating in sprint planning, retrospectives, and daily stand-ups
- Good exposure to requirement analysis, project estimation, and production support
- Ability to deliver high-quality, scalable, and maintainable solutions with strong problem-solving skills

EXPERIENCE SUMMARY

- Working as a **Java Developer** for **Accenture** from **Jan 2026 – Till now**.
- Worked as a **Java Developer** for **upwardiq IT Solutions** from **Dec 2025– Dec 2025**. (Contract)
- Worked as a **java Developer** for **Bo IT solution** from **Jan 2022– Nov 2025**.

TECHNICAL SKILLS

Languages: Java 8, Java 17

Enterprise Technologies: JDBC, Servlets, JSP

Frameworks & Architecture: Spring Boot, Spring MVC, Microservices Architecture, Event-Driven Architecture

Messaging & Streaming: Apache Kafka (Producer/Consumer, Streams, Event Processing, Real-time Data Pipelines)

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, CloudWatch, IAM), Docker (Basics), CI/CD Pipelines

ORM & Persistence: Hibernate, Spring Data JPA

Testing & Quality: JUnit 5, Mockito, Integration Testing, Unit Testing , Postman

Web Services: RESTful APIs, SOAP Web Services

Frontend Technologies: React JS, HTML, CSS, JavaScript

AI-Assisted Development: GitHub Copilot, ChatGPT, AI-Assisted Code Generation, AI-Assisted Debugging, AI-Assisted Documentation, Developer Productivity Tools

Database: MySQL, PostgreSQL, MongoDB

DevOps & CI/CD : Git, GitHub, GitLab, Maven, Gradle , CI/CD Pipelines, SonarQube

Tools & IDEs: IntelliJ IDEA, Eclipse, Spring Tool Suite (STS), Maven, Gradle

Operating Systems: Linux (Red Hat), Windows

Application Servers: Apache Tomcat

EDUCATION DETAILS

- Completed **Bachelor of Technology (2023)** JUNT Kakinada.

PROFESSIONAL EXPERIENCE

Project 4:

Client : CDK Global

Title : OEMI Modernization

Role : Developer

Environment : Java 17, Spring Boot, Microservices, Apache Kafka, AWS (EC2, S3, RDS, CloudWatch, IAM), Hibernate, Spring Data JPA, PostgreSQL, REST APIs, JSON, XML, XSLT 3.0, Git, GitLab, Maven, Jira, Confluence, Postman, Apache Tomcat, IntelliJ IDEA

Description:

OEMI is a robust enterprise integration platform designed to enable seamless, secure, and standardized data exchange between Dealer Management Systems (DMS) and OEM backend systems. The platform leverages **microservices and event-driven architecture using Kafka** to handle high-volume, real-time transactional data processing. It supports standardized message formats (STAR/OAGIS) ensuring accurate, secure, and compliant data exchange for parts activities, invoices, and related transactions with full auditability and traceability.

Responsibilities & Contributions

- Designed and developed **scalable microservices** using Spring Boot for OEM integration workflows
- Implemented **event-driven architecture using Kafka** for real-time data processing and asynchronous communication

- Built and optimized **RESTful APIs** for seamless integration between DMS and OEM systems
- Leveraged GitHub Copilot and ChatGPT for code generation, debugging, code refactoring, and technical documentation.
- Utilized AI-assisted development practices to improve productivity and accelerate feature delivery.
- Developed and validated unit and integration test scenarios using AI-assisted tools while maintaining enterprise coding standards.
- Designed and implemented **XSLT 3.0 transformations** to convert JSON-based dealer data into STAR-compliant XML messages
- Developed **bidirectional transformations (JSON ↔ XML)** including handling of serialized XML within JSON payloads
- Worked extensively on **Parts Invoice and Parts Activity mappings**, ensuring alignment with OEM specifications
- Handled **complex XML structures**, including namespace management, schema validation, and data normalization
- Implemented business logic for **conditional field mapping, null handling, and hierarchical data processing** (parts, taxes, payments, contacts)
- Integrated **PostgreSQL database** using JPA/Hibernate for efficient data persistence and retrieval
- Deployed and supported services on **AWS cloud infrastructure**, ensuring scalability and high availability
- Collaborated with business analysts and OEM stakeholders to **analyze requirements and resolve mapping gaps**
- Participated in **design discussions and architecture decisions** for modernization initiatives
- Performed **unit testing, integration testing, and validation** to ensure data accuracy and compliance
- Used **Postman for API testing** and validation of end-to-end flows
- Monitored applications using **AWS CloudWatch** and supported production issues
- Followed **Agile/Scrum practices**, tracked tasks and defects using Jira
- Maintained documentation and mapping references in Confluence

Project 3:

Client : BECTRAN(Internal)

Title : Credit Application & Accounts Receivable Management System

Role : Developer

Environment : Java, Spring, Spring Boot, Hibernate, Microservices, RESTful Web Services, JSF, PrimeFaces, Maven, Postman, Jira, Apache Tomcat 9

Description:

BECTRAN is an enterprise-grade Credit Application and Accounts Receivable Management System designed to automate and streamline credit operations for businesses. The platform supports the complete credit lifecycle—from application submission and credit evaluation to approval and monitoring—while ensuring seamless integration with ERP systems for real-time data synchronization. It enhances operational efficiency, reduces manual effort, and minimizes credit risk through robust validation and decision-making workflows.

Responsibilities:

- Analyzed functional and technical design documents to understand business requirements
- Developed and enhanced application features using **Spring Boot and Microservices architecture**
- Built and maintained **RESTful APIs** for integration with external ERP systems
- Implemented business logic using **Spring and Hibernate (JPA)** for efficient data handling
- Worked on **UI development using JSF and PrimeFaces** for credit application workflows
- Fixed defects and resolved issues raised via **Zendesk**, ensuring timely delivery
- Performed **code enhancements, refactoring, and performance improvements**
- Participated in **Agile/Scrum ceremonies** including sprint planning, daily stand-ups, and retrospectives
- Collaborated with cross-functional teams to clarify requirements and deliver solutions
- Conducted **API testing and validation using Postman**
- Supported **production issues and incident resolution**, ensuring system stability
- Deployed and managed applications on **Apache Tomcat 9 server**

Project 2:

Title : IR STING

Role : Developer

Environment : Java 8, Spring Boot, Microservices, JPA, MySQL, JMS, Maven, Git, Jira, Postman, Service Virtualization (CA DevTest), Apache Tomcat, Eclipse

Description:

IR STING is a shipment tracking and validation system designed to ensure that shipments are successfully created and follow the expected lifecycle from origin to destination. The system processes shipment data through multiple services such as Shipment, Trip, and Waypoint, enabling end-to-end tracking and validation. Shipments are created by publishing JSON messages via JMS, ensuring reliable and asynchronous data processing across distributed microservices.

Responsibilities:

- Analyzed functional and technical design documents and interacted with clients to gather requirements
- Developed and implemented **RESTful APIs using Spring Boot** for shipment processing and tracking
- Worked on **microservices architecture** to handle shipment, trip, and waypoint workflows
- Integrated **JMS-based messaging** for asynchronous shipment creation and processing
- Used **JPA/Hibernate** for database operations and efficient data persistence in MySQL
- Performed **code enhancements, debugging, and defect fixing** to improve system stability
- Virtualized dependent services using **CA DevTest (Service Virtualization)** for isolated testing
- Conducted **API testing and validation using Postman and Swagger**
- Collaborated with cross-functional teams to resolve functional and technical issues
- Participated in **Agile ceremonies** including sprint planning, daily stand-ups, and reviews
- Ensured proper logging, monitoring, and error handling for smooth execution of services

Project 1:

Title : Cooperative Strategies

Role : Developer

Environment : Java 8, Spring Boot, Spring MVC, React JS, React Native, Hibernate, REST APIs, MySQL, SQLite, Maven, Git, Jira, Postman, Swagger, Apache Tomcat, Eclipse

Description :

Cooperative Strategies is a facility assessment and survey management system designed to streamline the collection and analysis of physical condition data for district schools. The solution consists of a **mobile application (Android & iOS)** for field data collection and an **admin web application** for managing, analyzing, and generating reports. The system enables real-time synchronization of survey data, improving accuracy, efficiency, and decision-making for infrastructure planning and maintenance.

Responsibilities:

- Analyzed functional and technical design documents and collaborated with clients to gather requirements
- Developed **full-stack features** using **Spring Boot (backend)** and **React JS (frontend)**
- Built and maintained **RESTful APIs** for seamless communication between mobile and web applications
- Developed **cross-platform mobile application using React Native** for Android and iOS devices
- Implemented **data persistence using Hibernate/JPA** with MySQL and SQLite databases
- Enabled **real-time data synchronization** between mobile app and admin web portal
- Performed **code enhancements, debugging, and defect fixing** to improve application performance
- Handled **production support issues**, ensuring minimal downtime and quick resolution
- Used **Postman and Swagger** for API testing and documentation
- Participated in **Agile/Scrum ceremonies** including sprint planning, daily stand-ups, and reviews
- Collaborated with cross-functional teams to discuss and finalize functional and technical specifications

Declaration:

I hereby declare that all the information provided in this resume is true and correct to the best of my knowledge and belief.
